

A fully managed, cloud-native security monitoring service. DigitalEra's SIEMaaS centralizes log collection, correlates security events, and provides 24/7 threat detection—all delivered by our expert SOC analysts, with no infrastructure required from your team.

Threat Detection & Visibility – Delivered as a Service

Centralized Log Management:

Securely collect and store logs from endpoints, firewalls, cloud services, and applications in tamper-proof archives aligned to compliance needs (HIPAA, PCI, GDPR, etc.).

Real-time Threat & Anomaly Monitoring:

Our SOC team continuously monitors your environment using predefined and custom detection rules, UEBA, and threat intelligence to identify high-risk activity.

Automated Detection & Response:

Security incidents are prioritized by risk scoring and escalated with actionable guidance. Optional playbooks help accelerate your response.

WHY CHOOSE US?

Proven Expertise:

Our SOC analysts apply years of hands-on experience in detection engineering, threat hunting, and compliance-driven monitoring.

Scalable Engagements:

Whether you're a fast-growing business or a complex enterprise, our SIEMaaS scales with your infrastructure and data sources.

Fast Time to Protection:

Rapid deployment and integration mean you're protected—and audit-ready—from day one.

MSSP Integration:

As part of our broader MSSP services, your SIEMaaS implementation can scale into managed response, GRC support, and VCISO advisory.

ELEVATE YOUR DETECTION & RESPONSE WITH **CONFIDENCE**

In a landscape of escalating cyber threats and compliance demands, businesses need more than logs—they need a **fully operational security monitoring program**.

Our SIEMaaS platform delivers 24/7 detection, correlated alerts, real-time dashboards, and compliance-aligned reporting, all without the need for in-house SIEM tools or staff.

We provide intelligent monitoring and incident response readiness that aligns with your unique risk and operational needs.

EMPOWERING YOUR **SECURITY OPERATIONS**

With built-in scalability and threat intelligence integration, SIEMaaS delivers continuous protection and adaptability—ideal for businesses that need strong defenses without building a full-scale SOC

- ✓ No hardware or maintenance overhead
- ✓ Real-time detection and powered by behavior analytics and threat intelligence
- ✓ Seamless escalation, incident support, and response playbooks

WHY IT **MATTERS**

SIEMaaS transforms complex security operations into a fully managed, real-time defense, giving organizations the visibility, speed, and compliance they need to stay ahead of evolving threats without the cost of building their own SOC.
